swissbit®

Preliminary
Product Fact Sheet

Industrial / Automotive e•MMC Memory

M1100 Series

JEDEC e•MMC 5.1 compliant
BGA 153 ball

Industrial / Automotive
Temperature Grade

Date: February 04, 2025
Revision: 0.96

Made in Germany

Product Summary

- **Capacities**: 8 GBytes
- **Operating Temperature Range**[1]:
  - Industrial Operating Temperature (Tambient) -40 to 85 °C
  - Automotive Operating Temperature (Tambient) -40 to 105 °C
- Endurance in TeraBytes Written (TBW) @ Max Capacity[2]: Target up to 25

Product Features

- Fully compliant with JEDEC e•MMC 5.1 Standard (JESD84-B51)[3]
- 153-ball BGA, 0.5mm pitch, 11.5 x 13mm, RoHS compliant
- 2D MLC NAND base technology
- Multiple MLC or enhanced/reliable mode partitions user configurable according to e•MMC Spec 5.1
- High performance e•MMC 5.1 specification
  - Eleven-wire bus (clock, data strobe, 1 bit command, 8 bit data bus) and a hardware reset
  - Three different data bus width modes: 1-bit (default), 4-bit, and 8-bit
  - Clock frequencies 0-200MHz, High Speed Mode HS400
  - Command Queue Feature according to e•MMC Spec 5.1
  - Target: Up to 230MB/s sequential read and up to 30MB/s sequential write
- Power Supply: (Low-power CMOS technology)
  - VCCQ 1.7V...1.95V or 2.7V...3.6V e•MMC supply
  - VCC 2.7V...3.6V NAND Flash supply
- Optimized FW algorithms
  - Power-fail data loss protection
  - Wear Leveling technology
    Equal wear leveling of static and dynamic data. The wear leveling assures that dynamic data as well as static data is balanced evenly across the memory. With that the maximum write endurance of the device is ensured
  - Read Disturb Management
    The read commands per region are monitored and the content is conditionally refreshed when critical levels have occurred
  - Auto Read Refresh
    The interruptible background process maintains the user data for Read Disturb effects or Retention degradation due to high temperature effects
  - Diagnostic features with Device Health Report according to e•MMC Spec 5.1, and detailed Lifetime Monitor data
  - Field Firmware updates[4] according to e•MMC Spec 5.1
  - Discard and Sanitize, Trim
  - Boot Operation Mode and Alternative Boot Operation Mode
  - Replay Protected Memory Block (RPMB)

[1] Adequate airflow is required to ensure the temperature Tcase does not exceed 95 °C (industrial temperature drive), respectively 115 °C (automotive temperature drive)
[2] According to JEDEC (JESD47I), the time to write the full TBW is a minimum of 18 months. Higher average daily data volume reduces the specified TBW. The values listed are estimates and are subject to change without notice.
[3] The verification of host system and storage device compatibility is in customer's responsibility. Swissbit can provide guidance and support on request.
[4] The support of In-Field FW update capabilities on host systems is recommended. The update must be transferred with a CMD25. For Linux, kernel 4.4 or higher is required.

- High reliability
  - Designed with sophisticated firmware architecture for industrial, automotive and embedded markets.
  - Ideal for application like POS/POI, PLC, IoT, gaming, medical and use as general boot medium for embedded applications.
  - The product is optimized for long life cycle that requires superior data retention as well as power fail safety.
  - Controlled BOM & PCN process

1 Order Information for M1100

Table 1: Available Part Numbers

	Industrial Temperature (-40 to 85 °C)	Automotive Temperature (-40 to 105 °C)
Capacity	**Part Number**	
8 GBytes	SM1100BB008GI-1SA1-1AA-STD	SM1100BB008GA-1SA1-1AA-STD

Why Swissbit?

Swissbit is focused on the design, development, manufacture, and support of leading edge memory and storage solutions for the worldwide OEM/ODM marketplace. As a global supplier, Swissbit recognizes and addresses the higher level of application requirements of today's industrial, Netcom, and automotive customers by providing best-in-class products and services, with uncompromised attention to driving overall value and quality.
