

The Swissbit logo is positioned in the top right corner of the slide. It consists of the word "swissbit" in a lowercase, sans-serif font, followed by a registered trademark symbol (®). The background of the slide is a composite image featuring a city skyline at night with illuminated buildings and a prominent, futuristic, glowing blue architectural structure with curved, wave-like forms.

# Reliable Storage & Embedded IoT Solutions

Your trusted partner for reliably storing and protecting data  
in industrial and IoT applications.

Store. Secure. Trust.

# Environmental Policy

## General Introduction

Environmental protection as well as occupational health and safety are an integral part of Swissbit AG. By creating and maintaining a safe, healthy and performance friendly working environment and by practicing environmental protection, we contribute to the success of our company.

The environmentally sound use of energy and other resources is of essential importance, both out of responsibility for our environment and future generations, as well as for economic reasons. Our corporate philosophy is to harmonize ecology and economy and to promote environmental protection in all areas of the company.

**Our goal is to continuously improve our environmental performance:**

We strive to continuously reduce existing environmental impacts within the limits of economic feasibility.

**1. We ensure compliance with laws and regulations:**

Compliance with laws, ordinances, official notices and other regulations is a matter of course for us. This includes the safe handling of hazardous substances.

**2. Environmental protection starts with the employee:**

We strive for a corporate culture that is based on the quality and environmental awareness, cooperation and motivation of our employees. We promote this through targeted training and information at all levels.

### **3. Environmentally compatible products:**

With our comprehensive quality and environmental management, we ensure that product quality remains at constantly high level. This is the basis for continuous process improvements. We strive to take environmental considerations into account in all areas of the company. This includes the design and development of products as well as the design of packaging and accessories.

### **4. We focus on environmentally compatible production:**

We use raw materials and energy sparingly. We always strive to reduce emissions. For unavoidable waste we look for economically reasonable ways of environmentally friendly recycling and disposal. The procurement of new production equipment is carried out under consideration of economic and environmental aspects. Our process flows are designed efficiently.

### 5. We promote environmental protection in the supply chain:

We see environmental protection as a shared responsibility throughout the supply chain. With our suppliers, we give preference to environmentally sound practices, such as the use of environmentally friendly means of transport and packaging.

We ensure that our customers are informed about proper storage, environmentally friendly packaging, best possible transport and relevant disposal options.
